Anvo-Systems Dresden GmbH signs distribution agreement with All Tech Electronics, United States

Dresden, July 2017 – Anvo-Systems Dresden, the specialist for non-volatile memory products, has signed a distribution agreement for the US with the American distributor All Tech Electronics, Inc. in Hawthorne, New York, United States. The aim of this expansion of the distribution network is to further increase sales of nvSRAMs, ensure logistics of the products and support customers even more effectively. All Tech Electronics specializes in providing high reliability electronic components for applications in markets including industrial and aerospace and is Anvo-Systems' first distributor in the US market.

“Together with our new distributor, we are able to further strengthen our presence in the US market and provide our customers with even better local support,” says Stefan Günther, Managing Director, Anvo-Systems Dresden GmbH. “We are seeing great interest in the US for our non-volatile memory products, which ensure data security and integrity in a wide variety of applications.”

Anvo-Systems Dresden already has a US sales office in Newnan, Georgia, which is managed by L. Dee Hockaday as Sales Director. A cooperation agreement, which Anvo-Systems signed with MaxTech Marketing, Ltd. for the Midwestern United States, serves to further develop the US market. Additionally, Anvo-Systems works together with CTA (Concord Technology Alliance), a manufacturers' representative, to cover the Southeastern United States.

Anvo-Systems' non-volatile memory products ensure storage of all data in the case of an unforeseeable power drop or, if desired, at any time when initiated by a command. In addition to the Internet of Things (IoT), applications include servers, medical, industrial automation, measurement technology, building automation and smart metering systems.

Anvo-Systems Dresden

Anvo-Systems Dresden GmbH located in Dresden was founded 2009 as fabless semiconductor company and provides non-volatile standard products, IP and services to the market. Core competencies include nvSRAM, FLASH, SRAM, and DRAM technologies. The fast, highly reliable, system solutions are designed for industrial, computational, medical, energy, automotive and communication applications.

Anvo-Systems Dresden has signed strategic cooperation agreements with X-FAB Semiconductor Foundries AG and Melexis N.V. The company is a member of the Semiconductor Cluster Silicon Saxony.
